

How to Winterize an Oxygen Pool

- 1) Make sure water is clear and debris removed from skimmer and bottom.
- 2) Test and balance: Alkalinity, pH and Calcium Hardness.
- 3) Run filter and Oxygen Generator for 48 hours continuously before closing.
- 4) 24 hours before closing add a double dose of Formula "O".
- 5) Drain equipment, remove Oxygen Generator and store it in a safe location for the winter.

Formula O Dosage:

- In season: 1lb per 10,000 gallons
- Winterization: 2lb per 10,000 gallons
